

Fieldnote Learning Centre

Fictional operating report | 2026-09-08

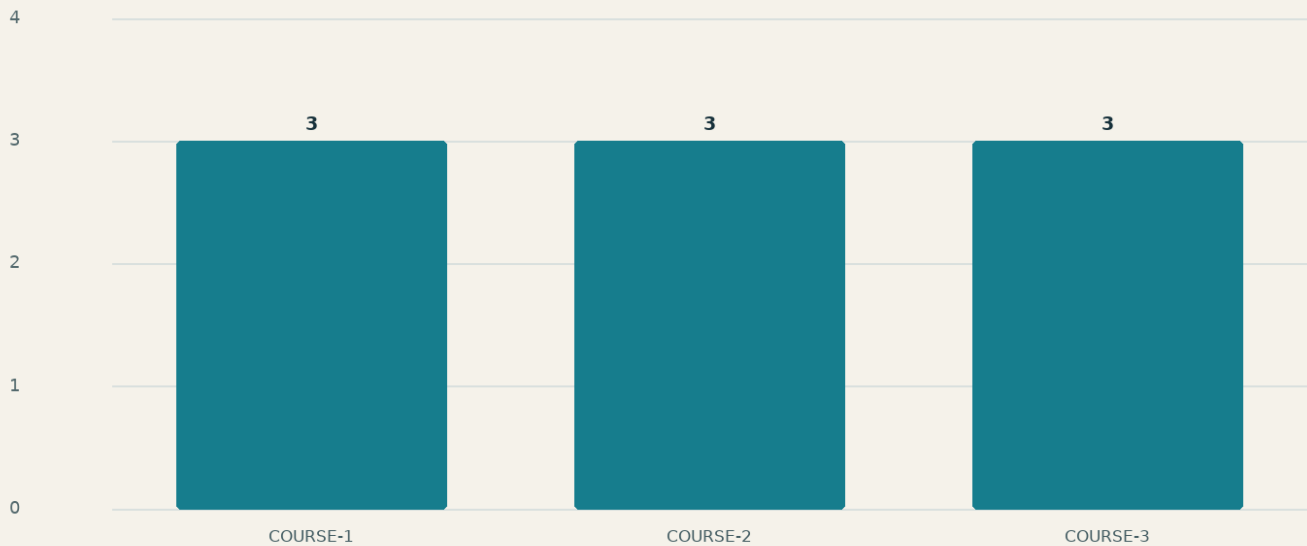

Fictional course capacity, enrollment, completion and assessment records for LMS mappings and reporting.

Metric	Value	Unit
Enrollments	18.00	records
Passed completions	9.00	learners
Available course seats	30.00	seats

NOVUS EXAMPLES / FICTIONAL OPERATING DATA

Fieldnote Learning Centre

Passes by course (completions)

Source: included operating-model.json. Fixed snapshot 2026-09-08.

Files and expected behavior

The workbook, chart and result assertions are derived from the same linked records. operating-model.json carries every source table. Schema validation covers field types; declared relational rules check uniqueness and references.

Source table	Records	Primary key
courses	3	course_id
learners	12	learner_id
enrollments	18	enrollment_id
attendance	36	attendance_id
learning_materials	3	material_id

Using the example

Blank input tables

blank-input-tables.zip contains a header-only CSV for every source table and a setup guide. Start with those files when you need a reusable empty template. Keep identifiers consistent across tables; the paired JSON Schema describes the data types.

Synthetic scores are data-processing examples. Course completion is not certification or evidence of actual training.

Use guide.md for the import sequence and expected-results.json for exact numeric assertions. Negative test records are intentionally invalid and belong in a validation harness.
