

Harbour House Stay

Fictional operating report | 2026-09-08

A six-room property with non-overlapping stays, room-night occupancy and linked ancillary charges.

Metric	Value	Unit
Occupied room nights	48.00	nights
Room revenue	6,840.00	USD
Ancillary revenue	672.00	USD

NOVUS EXAMPLES / FICTIONAL OPERATING DATA

Harbour House Stay

Room revenue (USD)

Source: included operating-model.json. Fixed snapshot 2026-09-08.

Files and expected behavior

The workbook, chart and result assertions are derived from the same linked records. operating-model.json carries every source table. Schema validation covers field types; declared relational rules check uniqueness and references.

Source table	Records	Primary key
rooms	6	room_id
stays	12	stay_id
extras	12	charge_id
itineraries	12	itinerary_id
event_resources	3	resource_id
events	4	event_id
event_catering	4	catering_id

Using the example

Blank input tables

blank-input-tables.zip contains a header-only CSV for every source table and a setup guide. Start with those files when you need a reusable empty template. Keep identifiers consistent across tables; the paired JSON Schema describes the data types.

Use guide.md for the import sequence and expected-results.json for exact numeric assertions. Negative test records are intentionally invalid and belong in a validation harness.
