

Cobalt Operations Team

Fictional operating report | 2026-09-08

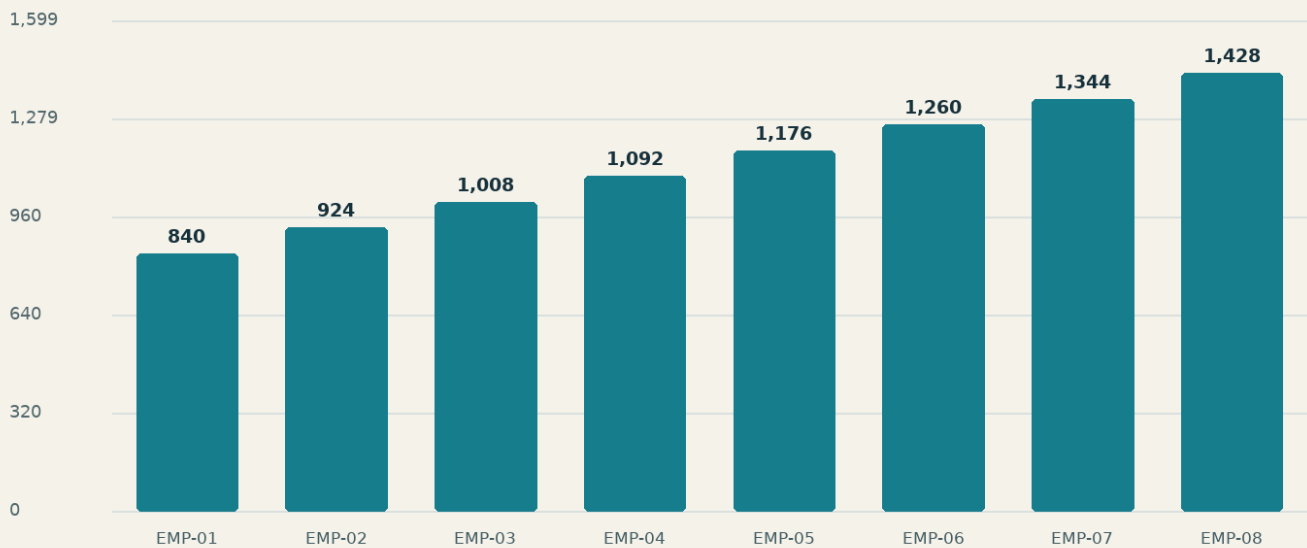

A fictional staff directory, paid-shift schedule and leave register with base-pay reconciliation.

Metric	Value	Unit
Paid hours	336.00	hours
Base pay	9,072.00	USD
Employees	8.00	records

NOVUS EXAMPLES / FICTIONAL OPERATING DATA

Cobalt Operations Team

Base pay by employee (USD)

Source: included operating-model.json. Fixed snapshot 2026-09-08.

Files and expected behavior

The workbook, chart and result assertions are derived from the same linked records. operating-model.json carries every source table. Schema validation covers field types; declared relational rules check uniqueness and references.

Source table	Records	Primary key
employees	8	employee_id
shifts	48	shift_id
leave_requests	4	request_id
service_slots	24	slot_id
service_bookings	18	booking_id

Using the example

Blank input tables

blank-input-tables.zip contains a header-only CSV for every source table and a setup guide. Start with those files when you need a reusable empty template. Keep identifiers consistent across tables; the paired JSON Schema describes the data types.

Base pay excludes statutory overtime, payroll tax, benefits and deductions. This is a scheduling/import example, not a payroll compliance engine.

Use guide.md for the import sequence and expected-results.json for exact numeric assertions. Negative test records are intentionally invalid and belong in a validation harness.
