How the totals are built

Each total is the sum of the 8 individual slips, each of which is rounded to the cent before it is added. Summing the rounded slips and applying the rate to the period total give the same answer here, and where they would not the slips win, because the slips are what the employee receives.

Employer side

Employer contributions match the employee figure one for one at 546.82 CAD, and employer premiums are 1.4 times the employee figure at 213.58 CAD. Both multipliers are declared fixture parameters listed in payroll-deduction-rates.csv.
